Bioactivity

Biological activity is assessed based on the ability of the immobilized protein to support adhesion of NIH3T3 mouse embryonic fibroblast cells. The expected ED₅₀ is between 2–10 µg/mL.

Reconstitution

1. Reconstitute protein to concentrations of 100 µg/mL or higher.
2. Use sterile deionized water to solubilize the lyophilized protein.
3. Gently tap glass vial to help collect the powder to the bottom.
4. Add desired amount of buffer, observe after 2 min. Gentle agitation by hand may be required.
5. Prepare aliquots of solution. Freeze at -20°C to -80°C to avoid repeated freeze thaw cycles.
